(*J. Thomas*)

*This detail is interesting on two counts. First as a variation on the typical office block cladding. The height of the opaque panels (infilling, white granite) is determined by the height of the filing cabinets. Though it is not apparent in this close-up photograph, the disposition of solids and voids on the facade gives an effect of "depth" which is unique in panel construction. The second point of interest is the build-up of the detailing from pressed steel and aluminium extrusions. Though not all the junctions would be acceptable in our climate, the inventive use of snap-on sections to make "aluminium joinery" deserves study.*

## working detail

## CURTAIN WALL: OFFICE BLOCK IN MILAN

Vico Magistretti, architect. (Material supplied by Derek C. Thomas)
